

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-djk4-z2az
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1929
Comment on FR Doc # 2025-02305

Submitter Information

Name: Paige Hicks
Email: [REDACTED]

General Comment

Research into AI should be thoroughly subject to all applicable laws and ethical standards, including and especially use of copyrighted material in training. If the AI generates output, it should be even more heavily scrutinized, especially if it's output is designed to compete with human generated copyrightable material.

No exceptions should be made.

Priority for any funding should be given to projects with explicitly clear, achievable goals and endpoints. Projects such as machine learning to help identify cancers and other ailments are one of the best uses of the broad range of technology, for example, while every project claiming it's aiming for Artificial General Intelligence (AGI) is fraud that should be investigated. Not only is the technology not capable of that yet, our own psychological understanding is not to a point where we could identify the qualities of AGI or create it.

As an AI designer for video games, it has been stunning how many people have readily been taken in by con men promising the world when all they have is cheap parlor tricks. Regulation needs to be potentially added so fake bubbles like OpenAI and ChatGPT don't rise to such useless popularity when they don't offer any helpful products to the world.

Any country creating tech like OpenAI's work is wasting money, and we shouldn't waste any more of ours. Other AI fields are with investigating, but there shouldn't be a single dime wasted on the LLM subfield of AI or anyone promising AGI.
