General Comment

I am a working artist. I also teach art to young people who are largely not entering the creative professions. We do not need AI. We are smart enough, creative enough, and this fad is a cheap and callow way to make those of us working in creative industries give up our hard-earned skills to a machine that gives us zero credit, zero compensation, and forces us to bid against an increasingly low bottom line. This will not help Americans--it will train us out of problem solving, it will offer solutions that can only ever be the distillation of things other have said. It will kill innovation and homogenize creative output for decades to come. It's trash, plain and simple, and only exists to enrich those who benefit from a populace that has gotten out of the habit of thinking too hard.
