General Comment

No Generative AI company has been profitable for several years, despite extensive advertising campaigns. Recent models from Chat GPT show little improvement over previous models.

There is a GREAT risk of wasting government funds pursuing a goal that may never be achieved.

Generative AI technology also relies on scraping data from copyrighted materials without permission, violating the intellectual property laws of the United States. The technology poses a significant threat to the work of visual artists and writers.

While innovation should be encouraged, the laws need to be upheld. AI needs some form of regulation. The people's money should be not spent carelessly.

The federal government should investigate the death of Suchir Balaji.
