Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-dwc2-t2zh
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1937

Comment on FR Doc # 2025-02305

Submitter Information

Name: Evan Alexander

General Comment

AI is something that's been part of our lives for a while now, despite the blow up in the last couple years. I don't see it going away, and honestly, I don't know that it should given what good could come of it.

"Generative" AI is where the concern seems to stem from and I do think creatives and copyright holders have every right to be worried. There's already been a large number of cases where AI software has been used to generate content that copies and in some cases, comes very close to completely reproducing what is and should be seen as copyrighted material.

I believe, now more than ever, that we need to keep ethics in mind as we look to grow the United States' AI capabilities. People need to be compensated for their work in some way if it is used in generative work. Full stop. Even if it takes AI minutes to create a product, it's building on a foundation created in part by hardworking Americans who still use those skills to earn a living. I'd like to see a system content creators can apply for that either fully exempts their work from any scraping attempts or allows them to receive compensation any time their work is used to train.

With how big the powers that be are trying to make AI in our day to day lives, what I'd like to see is a global summit where rules and regulations for AI use around the world can be drafted up to make sure everyone has an understanding of how to grow this technology ethically. This would also make sure everyone is on an equal playing field, so if a country does end up being on the cutting edge, it will be because of the talent and ingenuity of that country's researchers.
