General Comment

As an artist, I find the idea that the government wishes to remove what little protections there are against generative AI's plagiarism and environmental harm extremely concerning. The government will be de-incentivizing American innovation and progress in creative fields, actively taking away jobs, and harming the towns that house the computers that run generative AI if it removes what meager protections exist to prevent these greedy, immoral generative AI companies from harming our country. Instead, the government should be imposing more limitations on these companies. If the generative AI industry in the USA were to die, it could only be a good thing. Instead of racing China to see who can destroy their creative industries the fastest, the government should be protecting and encourage the artists that nourish the spirits and minds of this country's citizens.
