General Comment

Moving to allow all content, regardless of copyright, to be fed to generative AI models is a horrific move that destroys the lives of many people who create the items being offered to the generative AI. Destroying copyright laws just to feed generative AI will only bring harm, and is no more than legalized theft of intellectual property. Such a move is shameful. Creatives and businesses have been struggling against having their works stolen for generative AI, and having these changes go into effect will be devastating, stripping away ownership of anything they took time to create. Being unable to post creations online for fear of data being scraped and having no recourse will destroy many creatives' livelihoods, as many creatives depend upon selling creations online to earn money. Generative AI has no place in this area. Do not allow it in.
