## General Comment

If we carve an exemption from Copyright law we destroy the incentive for innovation in every area. Today they are taking images and documents, but next they will be taking existing software to copy, then they will move on to industrial design, and no industry will be willing to spend the money to develop something new. Capitalism isn't just competition, it's also built on inventors knowing that they can trust their ideas won't be stolen.

Copyright and Patent laws were created to INCREASE innovation because it encourages people and industry to invent something better, knowing they will be able to make a profit from what they created.

Remove that, and you destroy the very thing that has made our economy so great.
