As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-f0zo-owzm
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1967
Comment on FR Doc # 2025-02305

Submitter Information

Name: William Hill

General Comment

There is no valid case use for generative AI. The entire point of generative AI is to put writers, artists, editors, etc out of work. The results produced by generative AI are inaccurate to the point of legal liability. Even the suggestion that generative AI could be used in medical fields is dangerous as these platforms are essentially predictive text - the output is not trustworthy, and often produce damaging results.

These platforms are also trained on copyrighted works, which is grounds for further legal conundrums as they are more widely used. Direct excerpts of published copyrighted works have been found in examples produced by OpenAI. These platforms create nothing.

It is, by all measures, plagiarism.

There is no purpose in having this tech race with China over generative AI. It is a pointless endeavor where too much money and time is being spent. Again, no one has been able to produce a valid case use for generative AI in any capacity.

If anything, these platforms should be found as illegal and shut down from this point forward. Intellectual property holders should be able to file suit against companies such as OpenAI, Microsoft, X, etc for the utilization of their creative works in "training" these AI platforms.

This should never have gone as far as it already has.
