General Comment

AI doesn't do anything that humans can't do better. It can't even function without consuming tons of information and art from humans. It is literally an algorithm trained on our work, and it will not save you money in the long run because it will fall apart without constantly consuming new data-from humans. There are literally so many issues with AI just on a consumer level, so integrating it into important system will just results in catastrophic failure. Just hire people to do things, please.
