General Comment

Training generative AI and LLMs does not adhere to copyright law and cannot fall under the Fair Use Doctrine. There is no way to trace attribution and there is no way to guarantee that materials produced by generative AI and LLMs adhere to Fair Use, especially when the materials produced by generative AI and LLMs are used for commercial purposes. Stochastic models of language and art cannot provide enough original content to prove a distinction between amalgamation of others' intellectual property and original work that synthesizes disparate sources into a new intellectual property.
