

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-flk7-hsax
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2011

Comment on FR Doc # 2025-02305

Submitter Information

Name: Kelsey Genoways

[REDACTED]

General Comment

Copyright was created so that ideas can be easily created and shared. AI is a strange area to be in because, while developed by humans, Artificial Intelligence is not. From what I have read, our current model of AI is built on pattern recognition and is able to generate words and ideas based on models it has been given for analysis.

Creators, Authors, Speakers, Artists should have the final say if they want their works to be used to train AI and have it create works similar to what they have created. Taking away that choice hurts the small businesses of America. It completely ignores the very reason copyright law was created in the first place. Instead, this allows large corporations to run with little to no competition. Like a monopoly. Which should be illegal (or was the last time I checked). It allows large corporations to use materials they would have had to pay hard-working Americans for the right to use.

It also creates a dangerous precedent towards censorship. Those in charge of these AI generators can decide which works to analyze, which means some voices are going to be ignored and lost to time. There should remain a standard of protection for created works in the US that remains untouched and unstained by generative AI until better uses have been more thoroughly thought out.
