General Comment

Don't use AI, especially for national security.

AI, especially as it exists currently, uses too many resources like water for cooling systems - water we need for drinking. It burns entirely too much energy, energy that could be used to power homes and businesses.

AI also steals copyrighted works - priming AI for God knows how many lawsuits.

This pitch to incorporate AI into all facets of government sounds like a plot from the private sector to worm its way into public services and make things less efficient, not more. I understand that the tech sector in the private market is struggling, especially as it loses more market share. But that's because they keep reinventing the wheel in less efficient ways. This idea to incorporate AI into the government sounds like an attempt by the tech CEOs to save their companies from failing.

If that's the case, expect a 2008-like market crash.

Stop trying to save the tech sector from their failings. Don't use their AI models, especially as they currently exist.
