General Comment

I do not believe the current scope of AI technology has any positive effect on this country's future. Currently, it serves to not only steal jobs from Americans, but completely displace certain job titles which disproportionately affect "low skilled" workers. It is being used to learn from the hard work of real people with no credit to them at all, while creating profit for the people who create AI learning models. Late-stage capitalism means that most of AI technology is being produced solely because it can earn someone money, meanwhile the same tech is being implemented to suppress not only our own residents on our own soil, but also in military advancements that will remove the "human touch" from killing innocent people.
