General Comment

I do not think that the outsized usage of electricity and other resources is in any way worth the benefits of AI. Not to mention the waste involved in the massive scraping operations necessary to give them the information they need to make their models.

The biggest AI companies have made their datasets off the backs of American workers, artists, writers, etc without fairly compensating them for their work. And all of this build models that can't even answer questions correctly half the time or produce worthwhile art.

This is a clear bubble and not something we should be wasting our time, money, or resources on.
