

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-g2kt-87ej
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2055
Comment on FR Doc # 2025-02305

Submitter Information

Name: Sam Bergamo
Address: United States,
Email: [REDACTED]

General Comment

I know I may never make a living off my art. But to know that sharing online is only a path to making AI better and better at taking that living away from others is enough to stifle my motivation from making any at all.

I also teach math and art. Every day I dread a student asking me what the point of being in art classes at all is when they could just prompt AI. And every day I'm less and less confident of my answers. If something isn't done to address generative AI, the simple drive to pick up a pencil and doodle is going to be replaced with dribbling words into a prompter until it spits out something close enough. Traditional art, and using markers, color pencils, paint, they all come from the urge to doodle first, and evolve from there. Even if AI will never make physical paintings and original pieces, those will go away too if young artists do not want to doodle.

I attached a piece I did shortly before college. Only because it would not exist if I could just type "rainbow crystal dragon" and get a crystal dragon in a completely different style with a rainbow in the background and been happy with it. It was a doodle I couldn't step away from. It only exists because I was learning to make things pretty. And AI would've made 'pretty' far too easy.
