Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2057

Comment on FR Doc # 2025-02305

Submitter Information

Name: Kade B

Email: [REDACTED]

General Comment

Hello, I am an artist and I am here to say NO to AI! Generative AI, Large Language Models (LLMs), image diffusion models, and other similar tools are a gross violation of our rights to our own intellectual property and the United States should not support these technologies. They actively harm the American people's ability to function, and all it would take is a large foreign government filling the Internet with propaganda, or gaining influence with the developers of these technologies, to unduly influence the American people with misinformation. The technology is also unreliable, it gets things wrong constantly even without interference, and it is not suitable for any serious use case and it never will be.

The image generation tools (such as Stable Diffusion and DALL-E) are also harmful. They will not strengthen industries such as film and video games (two incredibly profitable American industries), they will destroy them. We will lose this export and cause many to lose their jobs if the United States invests in this technology.

I can go on about how these tools work and why they're incapable of doing the work real American workers already do, but I know this isn't the place. Just understand that they simply do not work.

As an American citizen who cares about art and humanity, and cares about not giving any more power to corrupt corporations who intend to lie and mislead us, I vote NO to AI! NO TO AI! NO TO AI! NO TO AI!
