General Comment

While I am not an artist, I am surrounded by those who are, and rely on their hard-earned skills to support themselves. Some barely do, while some can't without being reliant on others, such as their spouses or family.

AI threatens them daily by taking potential patrons and customers away, on top of flooding our search engines (especially on google images) with useless AI slop that makes it absurdly difficult to find the truth of an issue. Nevermind the AI slop that appears in various cheap ads for the world's latest crypto rug pull.

I believe that learning models and the people who host them must at the least give compensation to the people who make the work they use to feed their learning processes, and only if they consent- keyword, CONSENT- to their work being used to do so. Else, their models are inherently plagiarizing on real, living people who make art.
