General Comment

Innovating with AI through unethically stolen images from creators is just not right. The "Don't ask for permission, ask for forgiveness" approach to the sciences of AI coats the field in a business first, humans last type of grime. Solutions to the problem would be to have copyright systems in check, to give power to the people who have had their work stolen. Another solution would be to have creators submit their works voluntarily and have them compensated. The rampant disregard of human ethics that AI currently has paints the field in a terrible visage. It's disgusting to see and I wish things would get better for people first.
