General Comment

Allowing tech companies to have access to copyrighted and non copyrighted material without any compensation or regulation is a recipe for disaster for this country. Not only would companies with copyrighted material lose out on profits, creatives would be literally robbed for their art and ideas. AI being used to help creatives is ok as long as there is regulation. However cutting the creatives out entirely and those with copyrighted materials would fall victim to greedy corporations and begin to devalue creative arts, films, music and more. Art only has value when a PERSON creates it.
