General Comment

The incessant widespread adoption is the epitome of everything wrong with modern tech. Where will AI be in 5 years, when the majority of its training data it's scraping will be other AI-generated works? And moreover, how exactly does this improve American culture? Artists are already struggling to be seen, flooded by a thousand hastily made AI prompts for every single artwork. Something I've noticed with every AI advocate is that it "democratises art." On paper, it makes sense, but in practice it's blatantly wrong. Anyone is able to pick up a pencil and draw or write, and it's the idea that art has to be "good," an already subjective descriptor, to be worth something is honestly sickening. Allowing this plan to pass will be the death of the American arts; it commoditizes art, seeing it as nothing more than a product, rather than the parts of its sum.
