

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-h3x3-6j8p
Comments Due: March 15, 2025
Submission Type: Web

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2097

Comment on FR Doc # 2025-02305

Submitter Information

Name: Anonymous Anonymous

General Comment

AI needs to be subject to copyright law for the security of jobs for the American people. Creative jobs are being threatened continuously by AI that illegally scrapes copyrighted content in order to replace human workers with machine plagiarism, and as a freelance artist, I run the risk of losing my livelihood to AI and being unable to feed myself. Why should I have had to work for decades to perfect my artwork just for an AI to be able to take all of that effort, put it into a learning algorithm, and effortlessly replicate it? AI is stealing intellectual property and hard work from the American people, and stripping us of jobs. If more creatives become unemployed, this will further stress resources required for things like Medicaid, SNAP, and other low-income supports. We will be forced into an ever-shrinking job market as more and more people find themselves struggling to get employment with a limited number of jobs across many sectors, vs the number of interested applicants. In short, allowing AI to endlessly steal from Americans will not return any "dominance" but will help to cripple the economy. I thought this administration was all about efficiency? Perhaps those who are trying to train AI, who have significant amounts of money to do so, ought to be paying to license the material they use for their training data. This would also improve the AI by guaranteeing that the data they access is accurate and useful in the pursuit of AI dominance. We've seen already how Google's AI usage has resulted in search pages sharing inaccurate, nonsensical information in their AI overviews quite often. Casting as broad a net as possible clearly does not work for training AI that functions correctly. Instead of trying to break down barriers by destroying copyright law, the people interested in developing AI should perhaps be more purposeful in their efforts to secure proper, accurate data and the appropriate permissions to use it. It's for the good of the American public and the AI companies themselves that the data collection be held to higher standards, and that copyright law be respected.
