General Comment

I'm commenting on the action plan that we need to keep the current laws. I use variation services like Google to store my work in progress and completed works. I design and develop video games which includes coding, artwork, and writing. All of which I solely create.

If the laws are changed and companies are allowed to use copyrighted material to train their AI, then the AI companies must negotiate and PAY every copyright holder a fair amount of money for use. Creators whether they code, write, draw, among other things do so to generate income from their works. Allowing AI companies to use it for free is against economic sense and stepping upon rights of copyright owners due to their abuse.

I and many others, both companies and creators, are and will be deeply impacted by allowing these AI companies to use copyrighted materials for a quite frankly novelty product. As I have already lost income for people assuming my work is that of AI, which is quite insulting to me and the time I put into my craft. The AI companies must respect copyright laws.
