General Comment

As an artist and researcher, I highly oppose of the increased use of AI (artificial intelligence) in daily life. AI has proven to give false information and be inaccurate with details when asked. On top of that, AI takes from artists such as myself to create fast art (in a similar vain of fast fashion) ripping off artists and consumers alike. It also allows for individuals to not do their own research, creating a population that is more prone to lies and deceit. Now do I believe that this administration cares? Not one bit. However, further pursuit of AI will continue to tarnish the longstanding reputation of the United States to the rest of the world as a center of knowledge and the arts, tarnish the value of hard work and attention to detail in craft, and, in the end, will turn them away from seeing us as leaders of the free world. Is this something that we truly want to adopt? Do we want to see quality or quantity with life and livelihood? Do we want to look smart or be smart? These are things to think about as we move into a world where it's easier to consume falsehoods rather than do the work to understand the truth, no matter how difficult it is to grasp or how difficult it is to change our own minds. We should not be adopting tools to make art quick, rather pay our artist to make beautiful work. We should not be adopting tools to write papers and reports quick, but rather be learning how to use our own voices. We should not be adopting tools to do their work for us, but rather do the work to fulfill us. Tools are important, but if they are to replace human nature, they are not a benefit, rather they allow us to become without empathy. I highly ask for you to reconsider, from artists and researchers alike.
