Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2123

Comment on FR Doc # 2025-02305

Submitter Information

Name: M Capaldi

General Comment

"Generative artificial intelligence" is created with mass copyright infringement and has no business being legitimized by any government. Creators, inventors, and makers of all kinds have rights to their intellectual property which must be safeguarded. Other types of AI must also be carefully scrutinized by experts from multiple types of fields before being accepted into use. While there is a future for AI, we must not rush into it in a hurry to be the biggest or best without considering all the implications. Generative AI made with any material that was not properly licensed has no right to exist. Stealing and abusing others' property is not suddenly OK because it's done in large quantities or because a tech company just wants to. Computers cannot think or reason and have no "intelligence" the way a person does, no matter how much the tech sector would like us to believe they can and do, and so no computer or digital system of any kind should ever have more rights than a human being does or be held as exempt from the same laws as human beings are in this or any country.
