General Comment

AI datasets are built on the unchecked theft of everyone's labor and intellectual property. Presuming this administration truly values freedom & equality: if we're going to have generative AI, why don't we do away with copyright laws entirely? If companies like OpenAI are entitled to scrape websites, writing, art, music, and photography owned by ordinary Americans, as well as copyrighted content owned by other companies - then it stands to reason the general public should be free to use such "training data" for personal profit as well. Stop granting AI rights that human creators don't have, and liberate all content for everyone.
