General Comment

I am against US government support and funding of large language models (e.g. ChatGPT) or generative AI (e.g. Midjourney). As a creative who works with music and audio, I use tools that can be referred to as AI, but they are not LLMs or generative.

LLMs currently operate utilizing so many natural resources that an acceleration gives me concern for ecological impact. Along with this, the quality of the responses from these kinds of models are often inaccurate, and I am concerned with social reliance on the technology. There are numerous improvements that need to be made.

With this AND with generative AI, there also comes the issue of their usage of copyrighted data. Case law is still developing, but it is leaning towards the direction of creators whose work and art are being stolen and poached for usage in LLMs and generative AI. Not only is this plagiarism, but it also will destroy the careers of essential artists across the country. The quality of American art will suffer for the sake of corporate interest. Not only will this further cause instability in the job market, but it will diminish our international respect and lead to further unhappiness and dissatisfaction of life from a large percentage of the constituency.
