General Comment

Generative AI is a tool. It does not think. It does not create. It cannot recognize bias or common sense errors. It cannot adjust for unique situations or unexpected problems. It cannot innovate.

It should not be called "intelligence". The day that someone cracks actual artificial intelligence will be revolutionary. The path that lays down is not the one we tread now.

It can be an interesting and fun tool, certainly. It is not going to be as powerful a tool as the people selling it hope.

Let's not bloat & weigh down our software and engineer innovators. Let's not sacrifice other, more useful opportunities for advancement by giving heavy government priority to this one tool.

Buying too heavily into a bubble will screw us all when it bursts.
