

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-iobe-hase
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2187
Comment on FR Doc # 2025-02305

Submitter Information

Name: Jake Street

[REDACTED]

General Comment

Any AI regulation needs to be paired with a clear-eyed understanding of what the technology can do AND what it cannot. For years now companies with a vested interest in hyping the theoretical possibilities of AI have inflated the public's perception of what is possible, when in reality hallucinations (ie fabricated information) is part and parcel with the prediction engine that is AI.

There are things that AI is actually amazing at: providing a second look at radiology scans to support human doctors, doing a pretty darn good job at translating text, etc.

But as with any technology, humans should be in the driver's seat. I cannot emphasize enough how harmful it would be to allow AI to "make" decisions that affect real world situations, yet we are seeing that from court cases to employment already. Don't let technology outsource our decisionmaking processes simply because it seems like it might save money in the short term.
