General Comment

The current policies and practices of AI related companies allow them to take copyrighted works and repurpose them with no regard for the original creators. This needs to change. There needs to be an overhaul on the use of personal and copyrighted material to train AI models. These companies steal hard work from artists and offer cheap replacements, taking jobs, opportunities, and work from artists and using their own material to do so. AI is not like human intelligence, it cannot discern what is appropriate or not, it cannot offer the same value or quality of human work. In this market and economy AI threatens to steal and replace from millions of creatives using the very work they have created for decades. Consider the human damage this will have years down the line when our children cannot produce their own art or use their imaginations because AI companies have lead them to believe that they are suitable replacements for human expression.
