General Comment

AI companies (Google, OpenAI, & the like) are being disingenuous when it comes to the use of GEN AI. They're trying to instill fear about China gaining an advantage over the US painting it as a "national security" matter when in reality they're intending to use the application of copyright laws for their own lucrative purposes. Regulate the monetization of generative AI, tell everyone, no one is legally allowed to monetize the use of AI or monetize anything produced/generated with AI and you will see that it wasn't really an issue of "national security" for them at all.
