As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-jlgo-1bww
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2219

Comment on FR Doc # 2025-02305

Submitter Information

Name: Zach Thompson

General Comment

As AI tech advances and we consider adopting it more broadly, it is essential that we first protect copy-written content, and any content that has value, from authorized use in training models. This tech has already brought in hundreds of billions in funding, and, if the projections are to be believed, will bring in billions in profit. AI does not work without the data supplied to its models, and if AI is going to profit from that data then it must compensate those who produced the data.

Furthermore, AI model input needs to be tracked to address biases and potentially hazardous in accurate information, especially in areas of medicine and moral action, as people will come to trust these algorithms, thus we must make every effort and take every precaution to guarantee that they are, in proven fact, trustworthy.

Intense attention must also be paid to consideration around those who AI intends to automate away. Society is made of people, not corporations, and so societal benefit must be the primary goal of AI, NOT profit. AI also has great potential to create a dystopian future where it is used as a tool of oppression. It cannot be used to track the lives of individuals, nor in any capacity to single out individuals for punishment - whether that be criminal or persecution - freedom and privacy must come first. There is likely no end to the way this tech can be abused - often justified as serving the greater good - but as the everyday power we wield increases, and so also its destructive capabilities, we must safeguard ourselves against it. We learned this lesson with nuclear weapons, but "weapons" of the future will not look so crude. They will be subtle, and masquerade as anything but a weapon, yet that is what they will be no matter their name.

If we move forward with eyes open, honest about the dangers and risks, and do not make naive decisions about others may use AI, then we may well arrive at a future that benefits all of use and moves forward into a new age.
