General Comment

I do not believe Ai has a benefit to the American people as a whole in regards to many applications. Though I understand it can help with efficiency. It can not out right replace the majority of American jobs that require creativity and common sense. Which i thought that is what Trump ran on.

I realize the American dream is to be successful. But how are is too far? I am pro business, pro capitalism. But I am anti crony corporate and anti investor.

I can see Ai's use needed in defense and strategy. Limited use in education. But corporations desire to further reduce their work force so they can further deepen their pockets is absolutely a no go. Ai should not be allowed for any form of corporate greed. Which is what is being heavily pushed. Ai generated ads and Ai generated focused consumerism needs to stop.

Ai should not be used to target people to spend money. Should not be used to further ones education, that alone feels like cheating and no educational retention comes from it.

long story short. No Ai if it means greed, reduced creativity, and reduced education. End of story.
