General Comment

I am horrified by the American government's AI action plan, as it will undercut and harm the very American workers the government purports to protect. We are already seeing the effects of AI replacing workers and creating massive job cuts, and if AI is allowed to proliferate unabated, the effects on our job force and economy will be disastrous. As it stands, our country is already ill-equipped to handle rising levels of unemployment, and the unmitigated growth of AI will only exacerbate this problem.

To say the least of AI's blatant breach of copyright law, as our current large-language models are not truly "intelligent," but a pattern recognition machine built on the stolen words and artwork of hundreds of thousands (if not millions) of hardworking Americans, none of whom have been compensated for the use of their work without permission. If this is allowed to continue, this will only harm small businesses and creative entrepreneurs, on which the entire bedrock of this country has been built.

AI, like many other ill-conceived tech ventures, is a bubble that will burst with resounding negative effects on the American economy. We must put regulations and stopgaps on AI now before it is allowed to destroy our futures.
