## General Comment

I do not believe AI holds use to us in its current state for vast majority of cases, apart from medicinal uses, all current sources of learning algorithms in the past two years have proved deeply unprofitable, with no clear future for it to reach, nor do I believe it would be able to feasibly do so, requiring untold amounts of data forcibly harvested while at same time never understanding any information apart from barest details such as formatting, as well as stealing such large amounts of jobs that we would face economic downturn on the levels of the early 1930s
