General Comment

This action would allow AI company's to use information/assets they do not own nor have the rights to use in order to train their for-profit AI systems. AI systems have always been proven to be in direct competition with existing non-AI businesses and employees. To allow AI access to information they do not own (which many AI companies are already using), would be an unfair advantage, as well as an erosion of American law and rights. The context of the business should not allow for carve outs. Copyrights would be broken. Privacy would be broken. The ends do not justify the means.
