General Comment

It's essential that the United States have a fair and equitable system of copyright. So-called "AI" companies' positions that copyright shouldn't apply to them -- a retrospective position, adopted after they engaged in the largest infringement of copyrights in human history -- should be rejected. Adopting such a position would create a two-tiered system of justice, where an individual is liable for infringement for downloading an ebook, but Facebook is allowed to download them by the millions without consequence. The incoherence of such uneven application of copyright laws is readily apparent and unjustifiable.

The purpose of copyright is to encourage creation by offering protections for works which allows their creators to profit from them. Absent this protection, the supply of new works will diminish, putting the US' leadership in numerous industries at risk.

As someone who's had my work infringed by AI companies, this is a personal issue for me. This behavior is inexcusable and shouldn't be encouraged.
