As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-jo9z-2ofr
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2273

Comment on FR Doc # 2025-02305

Submitter Information

Name: Danielle Doughty

Email: [REDACTED]

General Comment

Generative AI is copyright infringement. It is clear without strict regulations it will continue to be used unchecked and will be a detriment to those who cannot afford prolonged copyright infringement lawsuits.

This clearly favors large companies with legal teams and throws all individuals under the bus, some who rely on their work as their sole income.

In education it is clear that generative AI is also kneecapping students ability to develop critical thinking as they begin to rely heavily on generative writing tools. In the long run this will stifle innovation and lead to the US falling behind in education, including but not limited to science and health fields.

In the use of AI in potential military applications, I struggle to think of a scenario where there is not enormous negative ethical implications. I do not think we should be attempting to utilize this. I think it is only valuable to have a defense for it from other nations.

In general, AI removes the human capacity to think of the moral and ethical consequences. In things like sorting large quantities of aggregate data I'm sure it's useful. In others, it is theft.
