Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-jqti-sg8v
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2276

Comment on FR Doc # 2025-02305

Submitter Information

Name: J M

General Comment

Gen AI (Generative Artificial Intelligence) is absolutely horrible. Our current elected president is old and therefore doesn't actually care about the implications of how Gen AI will affect our country AND the environment; that is to say that the current president is effectively senile and driven by monetary gain and power.

If the course of action is to include Gen AI as a part of the government, I implore you to ask AI how many "R"s are in "Strawberry". The reason it doesn't work and is not accurate is due to the fact that Gen AI is an algorithm that approximates and generalizes input data and makes GUESSES to provide an answer. Images that are generated are created by a multitude of images layered on top of one another to simulate new concepts or visuals (hence, it is STEALING from videos, artists, and photographers). Generative AI doesn't mean it creates something new, it means it's generating information based on a catalogue of data it already has to approximate something "new" by image bashing and data smashing [1].

If Gen AI is added to the government, sensitive data will be easily hackable, leaked, attained from individuals outside of the main government offices. Foreign adversaries will be able to attain sensitive and privatized data, even up to and including any classified documents that might be added to the Generative AI's model or breadth of search.

If that is not something you're worried about, then consider that it has a deep environmental impact. If the US Government decides to absorb Gen AI, you will be solely responsible for the drying up of lakes[2, 3, 4], dirtying of water[2, 3, 4], CO2 gas emissions[3], using too much energy [3], fires caused by the warehouses (burning plastics, metals, and other infrastructure) due to overheating and spontaneous fires of the computers running Gen AI, increasing temperatures of the world, and much, much more.

Please take time to actually consider how devastating adding Generative AI to the government would actually be.
