General Comment

I don't believe AI has a meaningful future in America's international standing, especially with the advances in open-source projects that can, already have, and will likely continue to undercut commercial projects. This plan's sole potential is as a means to further erode the rights of Americans to own their own creative labor in order to benefit private tech companies who operate behind opaque curtains. It's an embarrassment to an administration that claims to be interested in "cutting bloat" from our nation to so flagrantly kowtow to these corporate parasites.
