General Comment

Generative AI technologies rely on making the statistically most average output based on data gathered without any consideration for the data's owners or hosts. The idea that this technology can lead to innovation or a stronger nation is ludicrous, as the most statistically average output is always SEO slop that adds little to no value to any application. Human brains have already made the value of data a race to the bottom as it seeks to extract value out of the least amount of effort possible.

A strong nation and economy needs to rely on true innovation and statistically unlikely ideas to get ahead. Building further AI technology will just accelerate the race to the bottom to automate good business, ideas, and innovation out of our lives.
