General Comment

Generative artificial intelligence destroys jobs for the citizens of the United States. As an artist, my security in my field is threatened, and not only that, but those careers of my friends and family remains on the line. With the combination of the push of AI, and the recent cutting of funding of long standing pillars of our communities, where do those skilled workers turn to? I would love to live in a world where machines can do undesirable jobs, but AI is replacing arts and humanities, fields that have humans who love the work that they do. True artists do not hate making art, so why replace them? So that business can make more money? When did our country become a place that only cares for corporations, and not the individual?

This is not to mention the horrific environmental impact AI has. Our climate has been destroyed enough. Is the U.S. truly on the right side of history?
