General Comment

I humbly request that the AI Action Plan should not trample on existing copyright, trademark, and patent law; artists, scientists, authors, engineers, film workers, game developers (of which I am one), painters, musicians, and others all depend on these implemented systems in order to guarantee our livelihoods. Since the establishment of our country, these groups have all operated under the assumption that their creations and inventions were their property. This understanding has underpinned much American success in the arts and sciences and has incentivized new creations that keep us ahead of the competition culturally and technologically.

Vultures such as OpenAI and Google do not keep us ahead. By throwing existing law to the wolves, you are erasing the incentive structure for creators to keep creating. This is a short-term strategy that will only destroy American culture and science in the long-term. What will result, perhaps in years, perhaps on the scale of decades, is a disgusting Ouroboros feeding on itself, never introducing new ideas, never innovating -- the definition of stagnation.

Do you truly wish this for our country? To shoot oneself in the foot for short-term and fleeting gains? If the primary concern is competition with China, and the problem is China's disregard for copyright, the solution is not to sink to their level. The solution is to tariff them and cut off trade until they comply with American copyright law, and force them to rise to our level. This can be accomplished with trade agreements and foreign policy.

Please be wise and please make the right decision here. Otherwise, American creators will gladly move to the European Union where their inventions, creations, and rights are respected and protected.
