General Comment

American dominance has been in human innovation and artistry for hundreds of years. AI will ensure that comes to an end. Generative ai/machine learning cannot create or innovate, it only regurgitates what we give it. Asking it to design something new will not lead to breakthroughs or innovation, but a collage of previously written ideas, still leaving the work of making it usable to humans- better to keep the concepts human as well, since we will need to do the rest of the work anyways.

Hollywood and Disney are American cultural staples- there's not a country in the world who can ignore that the American movie industry is the best in the world, and allowing AI into that artistic process would destroy it. It's not possible to regurgitate previous content and produce art.

American dominance in AI should stay technical and theoretical, and any plan MUST recognize the contributions of human innovation and protect that strong American core of invention.
