

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-kani-wbwx
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2324
Comment on FR Doc # 2025-02305

Submitter Information

Name: Sean Fisk

General Comment

AI is a comnan's tech, with such abundant failure and false positive rates that it should not be trusted to give accurate information in any situation, regardless of the weight. Even the most basic testing shows that it can easily be convinced to drop safety guardrails by reframing questions as theoreticals, or by insisting that false information is true until it incorporates that falsehood into its responses.

As for generative AIs, the training data is stolen, and the "unnecessary burdens" that the executive order refers to are the legal rights of American citizens. Personal works protected under copyright and patent laws are not available for looting, and media piracy on a much smaller scale has a legal precedent of disproportionate consequence for private citizens. There is no reason why a business should not be beholden to the same laws and precedent, and any reading of this executive order that would allow for such is likely illegal.
