General Comment

I do not believe AI has any benefit to the future of America.

GenAI models are destructive to the environment and energy intensive for very little human gain. They displace current jobs and are often inaccurate tools that require extensive oversight to be effective.

Furthermore they scrape content from skilled workers in a way that violates the individual's IP rights with very little recourse for removal from GenAI models. GenAI companies currently have very little oversight. We should be moving to create ethical oversight for these companies, not lessening regulations.
