General Comment

Any exceptions in federal copyright law will only serve to undermine American interests, freedoms, creativity, and innovation. Such a carve out in our laws would also create an opportunity for our rivals and enemies to easily and freely farm American creations and ideas by using tools made by big corporate interests who aren't necessarily beholden to forwarding U.S. interests. We fundamentally cannot trust these big tech companies to have unlimited access to such a massive dataset without American innovators and creators having a direct say in how, where, and when their works should be used. While we are a country that praises bold ideas and a desire to innovate, we are also one that's taken consistently firm lines against theft and exploitation of intellectual properties and freedoms. As such, big tech and AI companies should continue to be held to the standards of U.S. copyright laws, and denied special exceptions based on hype-filled promises that lack a firm vision of AI's place in the American economy and marketplace of ideas.
