

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-kcgt-i2c3
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-2331

Comment on FR Doc # 2025-02305

Submitter Information

Name: Aaron Watkins

General Comment

I think "unnecessarily burdensome requirements" is just another way of saying "copyright law". In other words, corporations apparently should have the right to use any and all copyrighted work as they see fit without compensating the copyright holders as long as its for "training AI". This would include things like training artificial voices, artificial image and video generation, artificial writing, and artificial music generation. So how about, rather than handing OpenAI and similar companies carte-blanche to destroy the careers of basically all creative people (and many others besides), we work on some sensible legislation that protects jobs in creative industries while also allowing for ETHICAL development of these kinds of machine-learning and neural network-based models? And if ethical versions of such models are impossible, then we shouldn't be developing them in the way that we are, and money should be going instead toward ground-breaking innovation in this field rather than just continuing to develop more and larger power-hungry, water-hungry digital trash-generation machines.
