General Comment

Removing restrictions on the development of AI does not make the United States a dominant player in the global technology space. It makes already globally dominant private companies more capable of disenfranchising even more already vulnerable Americans by believing that their human input is no longer necessary, that our environment is not worth protecting, and our trust in the circulation of knowledge is an obstacle to overcome for their bottom line.

Companies and individuals cannot be allowed to indiscriminately or discreetly harvest other individual's or group's creations or output to train their AI models, especially without their consent. This is already being done, illegally, and their illegal actions cannot be condoned.

Companies and individuals cannot be allowed to indiscriminately or discreetly enlarge their negative environmental footprint to train AI models and output AI creations at the expense of the well being of our planet and all who live on it.

Companies and individuals cannot be allowed to indiscriminately or discreetly allow their AI to present itself as an actual reputable intelligence or a real person. The dangers of this cannot be overstated.

Companies and individuals cannot be allowed to indiscriminately or discreetly present their AI as a reputable source of knowledge or information. The influence AI can have on influencing young children who believe it to be so, again, is a danger that cannot be overstated.

Companies and individuals cannot be allowed to indiscriminately or discreetly claim copyright or ownership of materials created through the use of an AI model that used data from individuals or groups who did not consent, were uncompensated, were unnamed, or were otherwise unwilling to have their data used for this purpose.

Unregulated AI does not lead to a bright future. It leads to massive disinformation, massive disenfranchisement of an already struggling populace, and massive negative environmental impacts from a country that is already failing to keep up with other nations leading the charge into a cleaner future. Unregulated AI is not meant to benefit the American people, it is meant in spite of them for the benefit of the already powerful.
