General Comment

Dear NSF,

Artificial Intelligence has to be used intelligently, and safely, if it's going to be used at all. Products like ChatGPT and Dall-E have been trained off of skimmed and stolen data, with no possible way of tracking back who it was trained by, or from. These two models, in particular, are emblematic of the problem of LLMs (Large Language Models). There is a use case for AI in detecting cancer early, or to convey emotional imagery to explain a person's mental state during therapy, or in creating superconductive chips that Humans struggle to refine further. With that said, creative works such as voice acting, writing, digital artwork and music MUST be protected.

The negative utilization of artificial intelligence to not only decrease wages for creative workers, or even force them even further into an unbalanced 'gig' economy makes it a danger to the people of the US, and arguably the entire world. If you cannot balance company's desire for near instant gratification and expansion with the dangers of a Large Language Model, then it will do far more harm than good.

I feel legislative protections for creative works (Artists, Musicians, Authors, ect) need to be in place before we look at becoming the forefront of Artificial Intelligence, because otherwise you'll destroy the underlying message of what it even means to be an American.

Sincerely

A concerned citizen
