General Comment

As a current working member of the US economy based in California who has been researching generative AI and its effects on the working class for the past few years, it is my belief that generative AI and AI companies alike need to be reigned in and forced to submit to restrictions in development that fall under copyright law based under the stolen work in the datasets they used to train and build their product(s). Allowing these companies to continue with reckless abandonment could potentially destroy the future of the film industry in California, which contributes to so much of the US's GDP that if California were to become a sovereign nation our GDP would be in the top five highest of the world. Destroying the employment of hundreds of thousands of workers in the arts for the sake of falsely promised progress by these grifting AI companies whose business model is built upon stolen data that was made BY SAID ARTISTS is cruel and unusual punishment and should not be tolerated. If promoting economic growth is the goal, the working class artists should be supported, not these tech grifters making false promises with a faulty product built upon lies.
